MAXIBIT – ACCESSORIES

LightScape Counter

With a simple lock you can attach a tabletop to your Lightscape 1x1 meter and create a bright shining counter to display your brand.

Single-sided Shelf Connector | Shelf

Maximize your LightScape display by connecting the single sided shelf connector to a metal shelf. This connector accessory allows a shelf to be connected on one side to display lightweight items like business cards or brochures. Customized pens or other give away items can also be displayed. The single sided shelf connector has many useful features like adjustable height, and the shelf can have straight or curved positioning by reversing the position of the connector. The shelf connector also needs to be brought with the 20" foot stabilizer accessory to support the extra weight and the metal shelf to be attached to the connector.

LIGHTSCAPE – LIGHTBOX

Accessories

Straight connector 180° | Top & Bottom

The connector is a useful accessory that can attach two LightScape units side-by-side at 180°. This can be done by simply lining up two units together and sliding the connector in between them. Lightweight and portable, with tool-free assembly, the 180° connector may be the easiest accessory to utilize to create modular custom solutions for your tradeshow presentations. For added stability, it's also recommended to purchase the 180° Middle Connector, which can be added to the middle of the LightScape, and the 180° Magnetic Connector, which can also be installed to increase the sturdiness of the LightScape display.

Connector 45° | Recommended Qty 3 for 2.5m

Quickly and with tool-free assembly connect various LightScape units at striking 45° angles, by utilizing this 45° Connector. An easily portable accessory that can break up large-scale graphics in striking ways, stand out from your competitors by utilizing this user-friendly accessory. The connector can be positioned between two LightScape units and snapped into place.

Connector 90° | Recommended Qty 3 for 2.5m

Quickly and with tool-free assembly connect various LightScape units at striking 90° angles by utilizing this 90° Connector. An easily portable, lightweight accessory that can break up large-scale graphics in striking ways, stand out from your competitors by utilizing this user-friendly accessory. LightScape units can be stacked on each other or overlapped to create modular structures. The connector can easily be inserted and snapped into place on the sides of connecting LightScape units.

LIGHTSCAPE – LIGHTBOX

Accessories

T Connector | Bridge | Divider

The "T" connector provides another creative way to connect LightScape units in a modular system as a means of division. Lightweight and easily portable, the "T" Divider Connector can easily be slid into place to connect two LightScape units in a quick and modular fashion. Requiring only one unit as division, the "T" Connector LightScape accessory allows companies to customize their trade show displays with easy tool-free assembly. A display can be composed of LightScape units to create a bridge, with configurable units stacked on top. The LightScape units can also be suspended in the air to create an intersecting T-shape to compose other modular presentations.

40 cm Side Locked Foot

The 40 cm Side Locked Foot LightScape accessory is the perfect solution to enhance the stability of a modular trade show display. The locked foot measures 40 cm and can easily be positioned and rotated into place without tools or struggle on the bottom of the LightScape. Lightweight and portable, the foot can make any customized modular display more stable and strong.

Hanging Sign Connector

The hanging sign connector is an incredibly useful LightScape accessory to hang custom signs from the LightScape display. This gives exhibitors enhanced ways to add brand messaging and attract attention to their display. The connector can easily be slid into place on a LightScape display then the custom graphic sign can be hung.
