

Seamless graphic precision

Network is a very compact and versatile pop-up system that is quick to set up at any location. It allows you to meet your customers where they are, rather than having them come to you. Network can be designed in a number of different shapes; straight, curved, wave-shaped, stair formations, double or single sided and many more. With Network Frost, you can turn the standard display system into a refined shelving system for a walk around experience of your displayed products.

Specifications:
