

Mounting of Maxibit Stage

Stage - Introduction	Mounting animation	How to fold the fabric	Fitting the lamps
			

- 1 Start with the magnetic tubes (not threaded).
 - a. Place double rows on the floor, where the wall should stand, to form desired shape
 - b. If the wall is to be made, for example 5.5 m, then 2x5 tubes should be placed (one set for the top and one set for the bottom). Twice as many if double-sided.

- 2 Then assemble the threaded legs
 - a. Mount the 40 cm tubes into the feet for 2,5 m height (90 cm if 3 m height)
 - b. Then mount the telescopic poles on top without extending them.
 - c. Mount the holders, one at the top and one at the bottom (45 sec into video #2). The upper holders are now at comfortable working height.
 - d. If double sided: At the top, all the holders on the front should be mounted into the upper groove and into the second groove for the back.

- 3 Mounting the fabric
 - a. Keep the printed side away from the floor to avoid dust and stains
 - b. Mount the tubes into of the upper channel.
 - c. Tighten the fabric sideways and fasten the upper holders.
 - d. Make sure that the holders pinch the fabric so that the seam is centered under the tubes and doesn't create unwanted stretching in the fabric. (If double sided: Do the same for the back)
 - e. Extend the telescopic poles to desired height
 - f. Slide in the lower tubes
 - g. Tighten the fabric sideways and attach to the holders (starting with the back if double sided)
 - h. Slide down the lower holders so that the fabric stretches neatly.
 - i. Make sure the fabric stretches evenly and nice. Re-fit the holders until everything looks perfect.
 - j. When everything looks perfect, mount the lamps (QR-code #4)

- 4 Dismantling – watch video 3 to fold the fabric correctly
 - a. Start by removing the lower magnetic tubes and place neatly and nicely in the tube bags
 - b. Carefully lower the telescopic poles without having the printed side against the floor.
 - c. Remove the upper magnetic tubes and place neatly in the tube bags
 - d. Fold the fabric together as instructed (video #3). It is important that it is folded correctly to avoid wrinkles and stains.
 - e. Remove all holders and place in their little bags.
 - f. Unthread all the vertical tubes and place in their bags
 - g. Put the feet in their bags. They should be placed at the bottom of the transport case together with the little holder bags. Then place the tube bags in top.
 - h. And last the properly folded fabric. Lamps go in the lid compartment.
 - i. Make sure the respective transport case is well marked to make warehouse handling and next-time mounting simple.
